| Description         | EtherCAT Terminal, 4-channel digital output, 24 V DC, 0.5 A, TwinSAFE |

#### Technical Data

The EL2904 TwinSAFE component is a digital output terminal with four channels. It switches 24 V DC actuators with up to 0.5 A per channel and has four fail-safe outputs. The outputs are controlled by a TwinSAFE Logic-capable component via FSoE. The component automatically switches off if it detects an error (fail-stop).

The EL2904 has safety parameters to specifically adapt the functionality to the respective safety requirements. For example, a current measurement at the outputs and a test of the outputs can be configured in order to be able to detect cross-circuits among other things and to react appropriately.

Special features:

4 safe outputs

integrated current measurement

testing of the channels can be activated

Standard outputs can be activated with integrated AND connection with a safe output signal
